

Conveyor and Power Transmission Belting Specialists

09-3

RF (Radio Frequency) welding capabilities enable Trico to create virtually homogenous "tight pocket" conveyance belts.

Custom sidewall fabrications for small part containment apps

Control spillage and contain cost of conveying small batch product with a custom belt fabricated by Trico Belting. Whether the environment is high-grade food processing or tougher duty material separating, we can configure sidewalls and cleats on the right base belt for the most challenging applications. Our ability to run cleats into the actual corrugate cavity of the wall reduces gaps to a minimum. It's a game winner when utilizing either PVC belts or even more stringent food-grade applications calling for homogenous materials. This fabrication service is available in a variety of widths for cold-bonded PVC and up to 28 inches for RF-welded scenarios. Minimum and maximum lengths will vary depending on the application. For more information on this specialty service or to discuss a specific application contact your Trico sales representative at the numbers below.
